Data Engineer & Tech Lead with 5 years of experience owning production-grade financial data infrastructure across investment management, cloud migration, and cross-functional delivery. Currently the technical lead for the data platform underpinning firm-wide investment reporting at Partners Group, driving both architecture decisions and end-to-end project delivery across engineering, business, and technology stakeholders.

PROFESSIONAL EXPERIENCE

Data Engineer – Partners Group **Apr. 2022-current**

Zug, Switzerland

- **Tech Lead for Data Service** — Partners Group's core data delivery platform, a production Java engine processing 13,000+ financial formulas across products, geographies, and currencies, serving 300,000+ daily API calls to the firm's risk, investment, and sales reporting layers. Owning the full data layer end-to-end: schema design, pipeline reliability, data quality, and stakeholder delivery across business and technology teams.
- **Driving high-impact data engineering for financial calculations**, including the redesign of performance fee logic to incorporate client tax jurisdictions and deferred tax liabilities — delivering multi-million-dollar annual savings. Managed the full project lifecycle: requirements gathering with investment teams, technical design, implementation, and delivery against firm-wide deadlines.
- **Led a team of 7 engineers** across advanced data and analytics initiatives, including building internal tooling on AWS Bedrock and Azure OpenAI. Coordinated delivery across engineering, infrastructure, and business stakeholders, regularly presenting strategy and roadmap to the CTO & Business Department Leaders.
- **Led the end-to-end delivery of a large-scale cloud migration** of 10+ Java and Python applications to AWS, coordinating across internal engineering teams, AWS solution architects, and business stakeholders — including the migration of the Data Service data mart from on-premises SQL Server to Aurora Serverless PostgreSQL, generating hundreds of thousands of dollars in annual savings. Managed timelines, vendor relationships, and licensing across a multi-month program.
- Awarded **Remarkable Employee of the Year** (2023) for Project Secundo — an Anaplan-based solution for the Partnership investment team that automated secondary investment underwriting workflows. Managed the project from scoping through delivery, coordinating between investment, technology, and finance stakeholders across multiple jurisdictions.

Data Scientist – Tetra Laval International **Sept. 2021-Mar. 2022**

Lausanne, Switzerland

- Designed and delivered an end-to-end NLP pipeline for thematic investment sourcing processing large volumes of financial and news data to surface emerging macro risks and investment opportunities at scale (6 figure investment savings).
- Applied transformer-based architectures (topic classification, sentiment analysis, question answering) in a financial context, with research conducted in collaboration with the EcoCloud Lab at EPFL (Prof. Babak Falsafi).
- Modernized the team's ETL workflows using Apache Airflow, improving pipeline reliability and reducing time-to-insight for analysts.

Software Engineer – Credit Suisse **Feb. 2021-Aug. 2021**

Lausanne, Switzerland

- Designed and developed backend microservices and scalable ETL pipelines in Java and Apache Spark (Palantir Foundry), centralizing financial data from disparate sources across internal teams.
- Collaborated closely with data owners, engineers, and business stakeholders to define schemas and ensure data quality at scale.

Junior Machine Learning Engineer – Visium AI **Jun. 2020-Sept. 2020**

Lausanne, Switzerland

- Built and deployed production Machine Learning pipelines for document classification and recommendation systems for two enterprise clients, reducing processing time by up to 50% (using deep learning frameworks like Tensorflow & PyTorch).

EDUCATION

Master of Science in Data Science – EPFL **2022**

Lausanne, Switzerland

- Master Thesis: Analyzing News Data to Detect Existing & Emerging Risks for a Global Corporation (with honours, 6 out of 6)

Bachelor of Science in Communication Systems – EPFL **2019**

Lausanne, Switzerland

- Exchange Program at Lund Technical University (Sweden), President of the EPFL Finance Association

SKILLS AND TOOLS

Domain: Financial data infrastructure, client & regulatory reporting, asset-level data modelling, cross-functional data delivery (large-scale)
Tool Expertise: Python (Serverless framework & AI development), Java (Spring Boot), MS-SQL & PostgreSQL
Languages: French (native), Arabic (native), English (fluent), German (A2)
